## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-3 are allowed.

1. Referring to claims 1 and 3, the following is a discussion of the most pertinent prior art. Polgar discloses a polarized relay comprising a E-shaped steel core with a armature movable, at least one permanent magnet and a coil wound on the inner core, and three vertical terminals with a switching part positioned above the operational part. Polgar failed to suggest limitations that "a second activated coil connected to a power voltage source and wound around the horizontal part between the connections of the horizontal part with the three vertical terminals" as set forth in the claimed invention. Lyons, III discloses a manually movable switch member part with a plurality of permanent strip magnets and a plurality of fixed contacts equally spaced apart, wherein the strip magnets have opposite attracting polarities in the closed position and having repelling polarities in the open position of the switching member. Lyons, III failed to suggest limitations that " a movable contact that are moved horizontally to the left or right based on a repulsive and an attractive force generated by an electromagnetic force" as set forth in the claimed invention. furthermore, there would be no benefit, suggestion, or motivation to combine the references of the prior art to achieve the claimed invention.
